

HEUSINKVELD®

RACE

CENTER

PEDAL SET

INSTRUCTION MANUAL

MOUNT THE PEDALS

Mount the pedals with the flanged M6 bolts (Torx 25) onto our Heusinkveld Ultimate+ Baseplate or a very rigid base. Longer bolts are included for different thickness pedal plates (1).

(1) Brake pedal

Clutch / Throttle pedal

CONNECT THE PEDALS

Plug each pedal into the corresponding port of the controller box (the small box with the metal enclosure).

If you have a 2-pedal set, you can leave the clutch port empty (2).

Connect the provided USB-cable between the controller box and the PC (3).

The pedals are pre-calibrated and will work after assigning them in your favourite simulator software.

Brake pedal

Clutch / Throttle pedal

ADJUSTMENTS

The RaceCenter pedals have several adjustments which allow you to set up the pedals to your preference.

All pedals:

- Pedal angle (4a)
- Pedal plate height (4b).

Brake pedal:

- Hard (default) or soft resistance (2 settings in total).

In order to change the brake resistance:

1. Insert provided tool (5) against elastomer stack backplate (6). Then pop out backplate (7).

2. Remove the 2 elastomers and replace by 2 elastomers with identical length but different resistance (8).

- Always use one short and one long elastomer.

3. Rebuild elastomer stack and pop backplate back in position.

NOTE: Always use cups and elastomer together.

Build the stack accordingly to the image on the next page (9).

PEDAL DEADZONES

In order to maximize the service-life of these pedals they are equipped with damped end-stops. The top pedal deadzone must be kept at 10% in order for the driver to achieve maximum pedal output before reaching this end-stop.

SMARTCONTROL & SMARTCONTROL LIVE

Heusinkveld® simracing products come with powerful software tools. Download SmartControl and SmartControl Live from our website heusinkveld.com/overview-smartcontrol-live.

With SmartControl you can configure (non-linear) pedal output curves, set pedal deadzones and brake pedal force and save your settings to an unlimited number of profiles.

With **SmartControl LIVE** you can activate your settings on the go. Change settings and apply your profiles while driving.
